

boost::noncopyable

```
classDiagram
    class boost_noncopyable["boost::noncopyable"]
    class tinyrpc_RpcApplication["tinyrpc::RpcApplication"]
    tinyrpc_RpcApplication --|> boost_noncopyable
```

The diagram illustrates a class hierarchy. At the top is the 'boost::noncopyable' class, represented by a rectangle with three horizontal compartments. The top compartment contains the text 'boost::noncopyable', while the other two are empty. Below it is the 'tinyrpc::RpcApplication' class, represented by a rectangle with three horizontal compartments. The top compartment contains the text 'tinyrpc::RpcApplication', the middle compartment is empty, and the bottom compartment contains a list of three public methods: '+ init()', '+ atConfigItem()', and '+ GetInstance()'. A blue arrow with an open triangular head points from the top of the 'tinyrpc::RpcApplication' class to the bottom of the 'boost::noncopyable' class, indicating that 'tinyrpc::RpcApplication' inherits from 'boost::noncopyable'.

tinyrpc::RpcApplication

+ init()
+ atConfigItem()
+ GetInstance()
