

std::exception

```
classDiagram
    class std_exception["std::exception"]
    class tinyrpc_tinyrpcExcept["tinyrpc::tinyrpcExcept"]
    std_exception <|-- tinyrpc_tinyrpcExcept
```

The diagram illustrates an inheritance relationship. At the top is a class box for 'std::exception', which is divided into three horizontal sections: the top section contains the class name, and the two bottom sections are empty. Below this box is a red arrow with an open triangular head pointing upwards. This arrow originates from the bottom of a second class box, 'tinyrpc::tinyrpcExcept'. This second box is also divided into three horizontal sections. The top section contains the class name. The middle section is shaded gray and is empty. The bottom section is also shaded gray and contains three public member functions, each preceded by a '+' sign: '+ tinyrpcExcept()', '+ what()', and '+ GetErrorCode()'.

tinyrpc::tinyrpcExcept

+ tinyrpcExcept()  
+ what()  
+ GetErrorCode()
